

## Search results query

---

I tried to search for a masjid by name, I decided to list the suburb, province etc. as I had these details, however, the search results stated , 0 results on this fine tuned search. I then decided to just enter the masjeds name and leave all the other fields blank. On this the search yielded 5 results? Is there anything in particular that would have caused this fine tuned search to result in 0 entries found?
